DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-4, drawn to a **process** of controlling water quality, classified in class 376, subclass 306.
 - II. Claims 5-13, drawn to an **apparatus** for practice of said process (nuclear reactor), classified in class 376, subclass 313.

Inventions I and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the reactor can be used to practice the process of producing radioisotopes for medical or industrial applications.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, restriction for examination purposes as indicated is proper.

2. If either invention I or invention II is elected, applicant is further required under 35 U.S.C. 121 to elect a single disclosed species of the iron filter for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable (see claim 11). Currently, no claim appears to be generic.

3. If the species of iron filter elected is an element forming ceramics through oxidation, carbonization and nitriding (see Section 2 above), applicant is further required under 35 U.S.C. 121 to elect a single disclosed species of the manner of forming ceramic, for purposes of examination. This additional requirement is to facilitate examining due to the diverse materials disclosed as suitable.

4. If either invention I or invention II is elected, applicant is further required under 35 U.S.C. 121 to elect a single disclosed species of the nickel filter for purposes of examination. This additional requirement is to facilitate examining due to the diverse materials disclosed as suitable (see claim 6).

5. Applicant is advised that the reply to the invention requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

6. Applicant is further advised that a reply to the species requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Conclusion

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rick Palabrica whose telephone number is 703-306-5756. The examiner can normally be reached on 8:00-4:30, Mon-Fri.
